

## **VACCINATION REQUIREMENTS**

### Vaccinations, deworming & flea prevention

We only accept animals that have been vaccinated in accordance with the following requirements. Kindly fax, email or Whatsapp proof of vaccinations & deworming when making final payment. Please bring vet books with you when dropping off your pet/s.

### Dogs

1. 5 in 1 against canine adenovirus, parainfluenza, parvo virus, distemper virus and hepatitis. Required to be done every 3 years, a minimum of 10 days in advance of going to kennels. Must have been done within the last 3 years before departure date from the Kennels. You may alternatively provide written titre test results from your vet showing immunity.
1. Rabies – Required a minimum of 10 days in advance of going to kennels. Needs to have been done within the last 3 years before departure date from the Kennels.
2. Bordetella Bronchiseptica (Kennel Cough) vaccination. **Not usually done in the home environment.** Ask your vet for the intranasal version. It takes effect within just 3 days, whereas the injection (Bronchicine) version, if never administered before, requires a course of 2 injections, 2 weeks apart, to be completed 2 weeks before arrival at the kennels. Whichever version you prefer, it needs to have been done within the last year before departure date.
3. Thereafter an annual Kennel Cough vaccination is required for kenneling, at least 10 days in advance of arrival.
4. Deworming is required at least 48 hours in advance of going to kennels. This needs to have been done within the previous 3 months. Please provide veterinary proof.
5. Whether on your own flea/tick programme or not, all animals will need to have a mandatory Capstar tablet upon arrival (harmless to your animal, but kills any fleas within half an hour), which is once-off. We are a flea-free kennel & cattery and would like to keep it this way.
6. We walk dogs in a grassed area, which also includes fynbos. Please ensure your pets are protected against ticks.

### Cats

1. 3 in 1 against feline panleukopaenia, feline calici virus and feline rhinotracheitis (herpes) virus. These vaccines should be administered within the last 3 years before departure date from the Cattery. You may alternatively provide written titre test results from your vet showing immunity.

2. Rabies - Required a minimum of 10 days in advance of going to kennels. Needs to have been done within the last 3 years before arrival.
3. Feline Leukaemia virus. Recommended, but not mandatory. If you know your cat is a carrier, please advise us.
4. Deworming is required at least 48 hours in advance of going to kennels. This needs to have been done within the previous 3 months. Please provide veterinary proof.
5. Whether on your own flea/tick programme or not, all animals will need to have a mandatory Capstar tablet upon arrival (harmless to your animal, but kills any fleas within half an hour), which is once-off. We are a flea-free kennel & cattery and would like to keep it this way.

**PLEASE EMAIL/FAX YOUR VET BOOK/S TO US, EVIDENCING THE ABOVE, WITH YOUR BOOKING FORM, PRIOR TO ARRIVAL. NO ANIMAL WILL BE ADMITTED WITHOUT THE REQUISITE VACCINATIONS.**
